Rob Lewis, OD

<http://www.familyoptometry.net/team/robin-lewis/>

The course will be held in 3 modules: 3 days lectures, 3 days rest and 3 days lectures.

The first module will start on Saturday, the 24th of September and end on Sunday, the 2nd of October 2022.

The dates are as follows:

Section I September 24-26
Section III March 18-20
Section V June 3-5

Section II September 30-October 2
Section IV March 24-26
Section VI June 9-11

The synopsis of the course by Rob Lewis:

FINDING THE GOLD HIDDEN IN YOUR PRACTICE

- ❖ Do you want more power to change the lives of your patients? Do you ever have a patient where you ask yourself, “What do I do with this patient, where do I start?”
- ❖ Are you looking to enjoy practice more, while leading an ever more successful team?
- ❖ Are you afraid of taking one more course full of talk, talk, and more talk that sounds interesting, but you end up just doing the same old thing?
- ❖ The highly experienced team of Rob Lewis, Caroline Hurst and Paul Harris with their 100+ years of clinical experience coupled with their extensive international teaching experience, have re-imagined teaching how to practice from the behavioural model of vision through using actual cases and case examples.
- ❖ We will discuss visual motor development, including primitive reflexes, the development and control of refractive conditions, such as myopia, astigmatism, and hyperopia, as well as optimal prescribing strategies for many various diagnoses so that prescriptions can be exactly tailored to the needs of the individuals we treat, including, but not limited to, those with Acquired Brain Injury, Autism, Strabismus, Amblyopia, or those who struggle with visual efficiency or learning.
- ❖ We will share a comprehensive curriculum of visual therapy including approximately 50 different VT activities including an opportunity to experience the activities first hand both as a patient and as a therapist so you need no longer doubt what activity might be best for that patient.
- ❖ While there will be some theory and discussion of the science involved, this case-based approach will help you make more sense of the information shared because these are real life cases to which you will be able to relate.
- ❖ Each case will move from the history to management and treatment, with the goal of helping you see how we are able to help each person become the best version of themselves, by improving their ability to apply their vision with skill in order perform life’s tasks with ease and grace.
- ❖ Rather than simply presenting lots of facts, ideas, techniques, and numbers , we will work alongside of you to apply our thinking and problem-solving processes, which will help you take yourself to a new level of competence, whether you are new to neuro-visual concepts or are a seasoned veteran.
- ❖ This transformation will occur over 18 days of education, broken down into six, 3-day segments. This course is designed for a limited number of delegates who will take the entire course together, so we can facilitate team learning and the growth and development of all.

- ❖ We know that this course will help take you to the next level of your professional career where not only will you have a more fulfilling practice, but a more lucrative one as well.

REGISTRATION

Please register as soon as possible as the class size is limited and we don't want you to miss out on this unique opportunity.
